DESCRIPTION	A vertical structure con intended to support the	sisting storag	of 2 uprights, joined by a se levels.	system of bracing profiles, and base plates				
DIMENSIONS AND COMPONENTS	An XS frame consists of plates and fixing element	of two X nts (bo	wo XS uprights and their corresponding bracing profiles, upright base s (bolts, nuts and bushings).					
DESIGNATION	FRAME [UPRIGHT MC	DEL]/[DEPTH]/[HEIGHT]/[FINIS	H]				
	UPRIGHT MODEL	XS	1, XS2, XS3					
		P	Base plate BP80/E000.	See datasheet FT-001007 s

MATERIAL		0	No upright base plate					
	DEPTH	Dia	Bt : Distance between Upright Face Widths Diagonal bracing (D600) is made using C3015 profiles with M1020 perforation. See datasheet FT-003439

Bracing consists of C30x15 horizontal and diagonal profiles whose length, based on the depth of the XS frame, is shown in the following table:

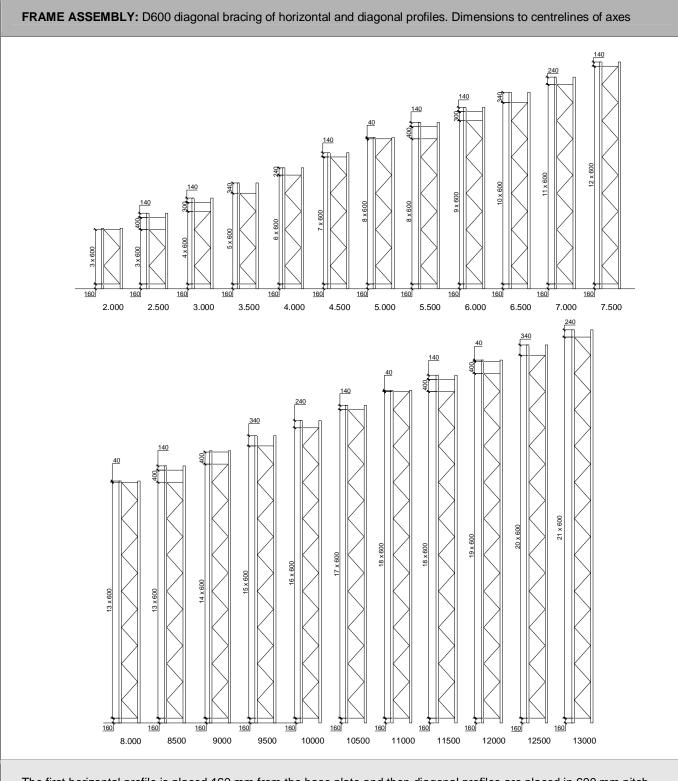

FRAME DEPTH Bt (mm)	LENGTH OF HORIZONTAL Lh (mm)	LENGTH OF DIAGONAL Ld (mm)		
600	529	814	1 cm	
700	629	881		
800	728	954		
900	829	1031		10000
1000	929	1113		
1100	1029	1197		
1200	1129	1283	2. 2.	
1300	1229	1372		

To calculate the length of horizontal and diagonal profiles of frames, the following equation can be used:

Length of horizontal profile:	Length of diagonal profile:
$L_h = L_{horizontal} = B_t - 108$	$L_d = L_{diagonal} = \sqrt{(L_h - 40)^2 + (600)^2} + 40$

The first horizontal profile is placed 160 mm from the base plate and then diagonal profiles are placed in 600 mm pitch, with a final horizontal profile. If the distance of the last horizontal profile at the end of the upright is equal to or greater than 440, another horizontal profile shall be placed at a minimum distance of 300 mm. The following figures show the different configurations depending on the frame height.

Please note the torque of C3015 profiles in order to avoid deformations during assembly (see ASSEMBLY INSTRUCTIONS).
